Point C is between A and B on \overline{AB} . Use the given information to write an equation to solve for x . Then solve the equation to find AC , CB , and AB .

1. $AC = 2x + 13$
 $CB = 10$
 $AB = 54$

2. $AC = 2x + 5$
 $CB = 5x + 15$

1. Line segments that have the same length are called _____.

Draw congruent line segments \overline{AB} and \overline{CD} below.

We can say that "the length of segment \overline{AB} is _____ to the length of segment \overline{CD} ."	We can say that segment " \overline{AB} is _____ to segment \overline{CD} ."
Lengths are equal. $AB = CD$ ↓ "is equal to"	Segments are congruent. $\overline{AB} \cong \overline{CD}$ ↓ "is congruent to"

2. A rule that is accepted without proof is called a _____. The Segment Addition Postulate states that when three points such as E, F, and G below are _____ (on the same line), we can say that _____ point is between the other two, and that $EF + FG =$ _____.

3. Find AC. 	4. Find BC.
5. Write an expression that shows the length of \overline{KM} . Simplify your answer. 	6. Write an expression that shows the length of \overline{KL} . Simplify your answer.

7. \overline{XZ} and \overline{YZ} below are congruent. Set up an equation to find the value of x .

$x =$ _____
